

Hydrangeas are among the easiest shrubs to grow in the Pacific Northwest garden. They are hardy to  $0^{\circ}$  F (or lower) and like full sun to partial shade and humus-rich soil. Fertilize in spring with a standard rose and flower fertilizer such as E. B. Stone or Espoma. Keep them well-watered during our summer dry season for best flower production.

The most common hydrangea species are *Hydrangea macrophylla*, *H. arborescens*, *H. paniculata*, and *H. quercifolia*. *H. macrophylla*, the big-leaf hydrangea, is the classical blue, pink, or white mophead or lacecap hydrangea. If you just say hydrangea, you're probably thinking of *Hydrangea macrophylla*. It usually grows as a rather large rounded shrub and produces one prolonged flush of flowers in midsummer. Dwarf and reblooming forms are now available.

Soil pH (acidity or alkalinity) determines the flower color and intensity for many of the *Hydrangea macrophylla* varieties. Sky's hydrangea list specifies the color changes to be expected for each cultivar, as do our plant tags. Our Northwest winter rains tend to turn soils more acidic over time, so flower color can change after planting. Acid soil tends to turn flowers blue or to intensify blue shades. Aluminum sulfate can be used to acidify the soil at a rate of 4 oz. (1/2 cup) per square yard. Water in well after applying. Liming tends to make soil more alkaline, which makes flowers pinker. Potassium nitrate is recommended to intensify pink and red shades; use 1 teaspoon per foot of plant height.

The other species do not change color according to soil pH. *Hydrangea arborescens* produces ball or dome-shaped clusters of white flowers on a more upright shrub; green and pink forms are now available. It is the most cold-hardy hydrangea. *H. paniculata*, sometimes called peegee hydrangea, typically grows as a large, spreading shrub with panicles (long cone-shaped clusters) of flowers that are commonly green, white, or buff, often aging to pink or red. Many varieties now offer bicolor or tricolor blooms. Flowers typically last into fall. *H. quercifolia*, the oakleaf hydrangea, is characterized by its rounded form, large oak-shaped leaves and excellent bronze to red-purple fall foliage color. It requires better drainage than other varieties. As with the peegee hydrangeas, the flower clusters are elongated rather than round, and are typically white, often aging to pink.

Sky also carries both deciduous and evergreen climbing hydrangeas.

Prune shrubby hydrangeas in late winter to early spring. Every year, head back the branches by about one quarter to one third. Make each heading cut just above a pair of plump buds. Every third year or so, completely remove some of the oldest canes. Climbing hydrangeas need only be pruned to shape or to remove spent flowers.

To dry the flower heads, pick them when in their best color and condition (usually in late August to early September). Hang them head down in a cool dry place for 2-3 weeks.
